

IDEAS

(1)

1) Bubble Map (Income)

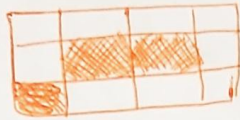

2) Scatter (Income v/s Rent)

3) Affordability

4) Rent stress heatmap

5) Income distribution

6) Trend lines by state

8) Rural v/s urban compare

7) 20 AGE Filter

FILTER

* Keep

- Scatter, Bubble map, Top 10 bar, Bar chart

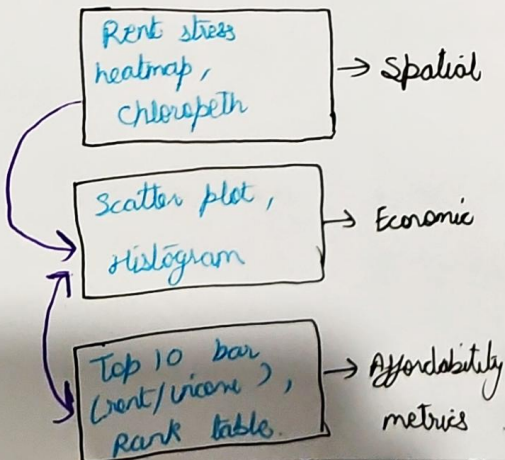

* Merge

- Histogram
- merge into map hover or sidebar

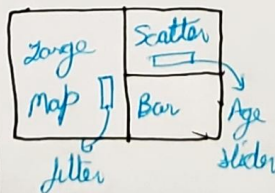

* Reject

- Line trends, not clear
- map comparisons
- white space issue

CATEGORISE

COMBINE & REFINE

QUESTIONS

- Design show rent v/s income clearly.
- Can policymakers identify high-stress zones.
- Age demographics?

Sheet (1)

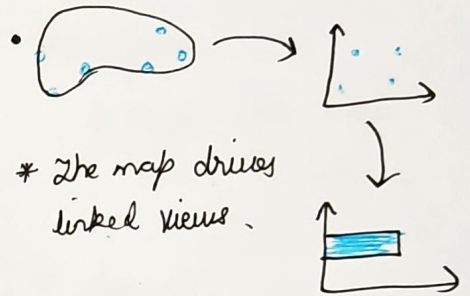

LAYOUT

Name: Nikunj Gupta
ID : 36293466
Sheet No : ②

Focus

→ Users start from geography, the map is primary way to discover patterns.

* The map drives linked views.

- ① Spatial for exploration
- ② Visual links highlight income-rent relations.
- ③ Immediate insight to regional differences.

OPERATIONS

Component	Operations
• Map	Hover → highlight data Click → zoom + update charts
• Scatter Plot	Brush area → highlight on map
• Bar Chart	Click bar → Show on map
• Filters	Adjust slider → recolor map

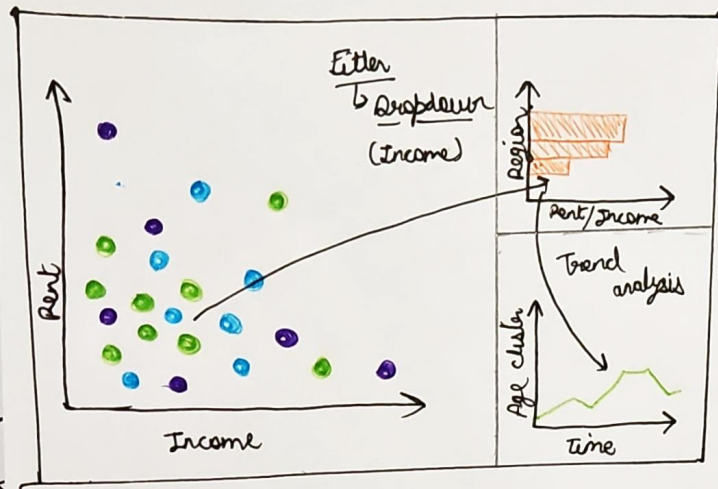

Pros:

- Clear spatial overview.
- Linked views support exploration of relationships.
- Visually appealing, engagement.

CONS:

- Requires geographic literature.
- Map can dominate screen space, less room for charts.
- Too many SA2's → clustering

LAYOUT

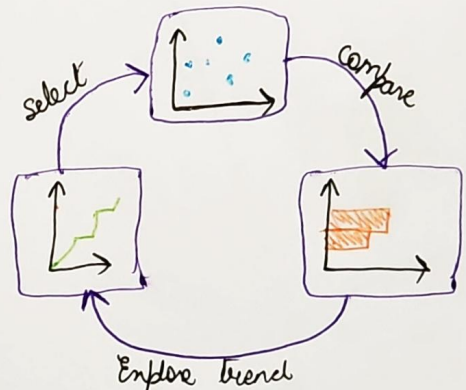

Name : Nikunj Gupta

ID : 36293466

Sheet No : (3)

Focus

- This design lets users compare groups and relationships b/w income, rent and demographic, variables through interactive analytical charts.

- Supports multi-variable investigation

OPERATIONS

COMPONENT	OPERATIONS
• Scatter Plot	Brush on groups highlights bars
• Grouped bar	Click bar → Filters scatters & updates trends
• Line Chart	Hover → Recalculates data in all views

Pros

- Enables deep analysis of relationships b/w variables
- Powerful for data-savvy users
- Supports flexible comparisons & filtering

CONS

- Lacks geographical storytelling
- Could overwhelm users with details
- Requires guided intro

LAYOUT

Income distribution in Australia

user scroll down to see key insights

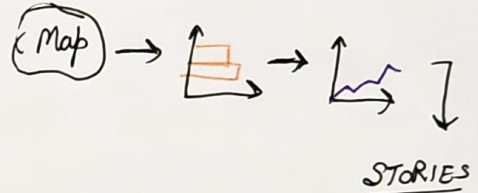

Name: Nikunj Gupta

ID : 362930466

Sheet No: (4)

Focus

- This design guides users through a story of income, rent and affordability.
- Focuses on communication and clarity rather than technical analysis.

- Scroll based storytelling
- Simple - clean visuals.

OPERATIONS

COMPONENTS	OPERATIONS
• MAP	Click start → highlights regions.
• BAR CHART	Auto Transitions → Rent burden per region.
• Line Chart	Click → displays trend
• Story Cards	Click card → Expands regional story with facts.

PROS

- Very engaging for non-expert audience.
- Helps tell a clear story.
- Clean layout, minimal clutter.
- Good for presentation.

CONS

- Limited interactivity.
- Harder to maintain if data updates frequently.
- May skip user-driven analysis.

Focus

* This final dashboard combines spatial exploration, analytical comparison, and narrative storytelling.

DETAIL

Points

① The proposed visualization combines spatial, statistical and narrative components.

② The core purpose of this system is to allow users to explore the relationship b/w income, rent and affordability.

③ The Australian affordability explorer will serve as a clean, data-driven interface to help users.

COMPONENTS	OPERATIONS
• Interactive Map	<u>Hover</u> → tooltip shows SA2 statistics <u>click</u> → highlights corresponding points
• Scatter Plot	<u>Brush</u> → selects clusters <u>hover</u> → pops up tooltips
• Bar Chart	sorted by Rent % of income clicking bar highlights map.
